Introduction

This report includes the investigation of a suspected involvement with stealing valuable artwork and ruining exhibits at the National Art Gallery by a staff member. The purpose of this witness report is to find out if the suspect is guilty of this crime. A disk image of the staff member's iPhone has been created, and the Autopsy application will be used to examine and analyse it. This is not a final report as the investigation is still ongoing.

Background Information

Alex is a wealthy businessman from Krasnovia. He has Krasnovian ties with a person inside the United States who is a Krasnovian supporter, she is known as Carry. He knows Carry as he is familiar with her parents, who have strong anti-American sentiments. His goal is to damage the United States by defacing foreign artwork in this gallery that belongs to Majavia, and ultimately damaging public relations. This occurs in the month of July.

Alex wants to send some 'tourists', who are actually Krasnovian supporters to Washington DC. to deface the artwork at the National Art Gallery. Carry needs to develop a plan to get into the gallery. Tracy is a supervisor at the National Art Gallery, and she knows who Carry is. Carry contacts Tracy and communicates small data back and forth under the assumption that Carry wants to organise a flash mob at the gallery, which she will need assistance with, and Tracy had been offered money to help her carry this out. The items that need to be transferred are suspicious, however not illegal. Tracy has financial issues, so she overlooks the suspicion of the items that Carry wants to bring inside.

In the past, Tracy has had conversations with her brother about stealing the stamps in the National Art Gallery due to financial issues to sell them. There is evidence on Tracy's computer with all this information.

Carry purchases a tablet computer and sets it up to use a new email account to communicate with Alex to set up the flash mob. She was interested in security, schedules, events, and locations of where the art will be displayed. She is tech-smart, so she can hide correspondence in steg and encrypted files.

Joe, who is Tracy's ex-husband, had installed a key logger onto her MacBook Air prior to the divorce to monitor what Terry (their daughter) does on it. Due to this keylogger in place, he discovers the crime that Tracy has been conspiring to commit theft. This also reveals the contact between Tracy and Carry. As a result of this, Carry's tablet and phone had been seized for further investigation, as Joe had reported it to the police.

People Descriptions

Alex

A Krasnovian supporter who wants to damage the United States and public relations of the National Art Gallery. He is a foreigner that lives in a region called Krasnoia. He knows Carry through her parents who are also Krasnovian supporters. He plans to deface foreign artwork

in the National Art Gallery, in Washington DC. He may possibly also want to ruin the reputation between the United States and Majavia.

Carry

Carry is an accomplice of Alex, as he has family ties, and will be working with him to commit theft. She is a Krasnovian supporter who lives in the United States. She is technologically savvy, which means she is experienced with most technology-based things. She also occasionally uses social media. She is also an acquaintance of Tracy. She was contacted by Alex as she is aligned with Krasnovia and has connections with people.

Tracy

Tracy is Terry's mother and Joe's ex-husband. She is a recently divorced mother in the middle of a child custody battle. Tracy's daughter is in an expensive private school which Tracy cannot afford. Her ex-husband will only pay to keep Terry (the daughter) in the school if Tracy will give custody to him. Tracy's daughter states that she will rather stay with her dad if it means that she can stay at that private school.

Joe

Joe is Terry's father and Tracy's ex-husband. He is a recently divorced father in the middle of a child custody battle, as the one described in Tracy's description. He is doing well financially and is still bitter about the relationship problems with Tracy. He initially installed a keylogger on the MacBook Air to keep track of Terry's activities, not Tracy's. Now that they are going through a divorce, he uses it to spy on Tracy's activities too. Joe used to have an account on the MacBook Air; however, it had been deleted.

Terry

Terry is the daughter of Tracy and Joe. She attends an expensive private school, Prufrock Preparatory School. She wants to stay in school to avoid having to start over and keep her friend, even though her mother cannot afford it, but her father can.

Pat

Pat is Tracy's brother. He is a police officer of the Washington DC Enforcement Bureau. He is a detective. He's very devoted to his sister and his niece. He isn't known to be a criminal, however he busted someone called 'King' with items that were against his parole, and hasn't arrested him on the promise of a future 'favour'.

Association of Chief Police Officers

The Association of Chief Police Officers, also known as ACPO, has a set of standards to guarantee both legal compliance and ethical treatment in the management of any digital evidence that has been acquired. They maintain data integrity in case of any damage threats or alternations made. This makes it reliable for the court room.

The principles of the ACPO are clear, and which you can find it in the ACPO Good Practice Guide for Digital Evidence, which provides information for handling digital evidence in an investigation.

Principles

The first principle is no action taken by law enforcement or people employed within those agencies should change data that may be relied upon in court. This involves any digital evidence too. When it was taken possession of the law enforcement, it should not have been tampered with or altered in any way when shown to the court. I have made sure of this by ensuring evidence has not been tampered with and kept it in its' original form. This ensures the evidence is exactly how it was when I analysed it on Autopsy.

The second principle is that if someone would like to access the original data for good reason, the person must be competent to do so and give evidence explaining the relevance of their actions. This may be necessary as operating systems are able to frequently alter, add, and delete contents of electronic storage without anyone being aware it has happened. I have done this by getting access to the keylogger that has been provided to me with the image disk. This is due to creating a witness report on this investigation.

The third principle is an audit trail or other record of all processes applied should be created and preserved. This should be carried out by an independent third party to examine the processes and achieve the same result. An image should be made of the device, to ensure the original data is preserved. I have done this by using the disk image that has been given to me on the brief. I will be reviewing the information.

The fourth principle is that the person in charge of the investigation has overall responsibility for making sure that the law and the principles are followed appropriately. I am not the person in charge of the investigation of this crime, however the law and principles will be followed appropriately.

Evidence Preservation

To follow the principles and law, I must make sure that no evidence is tampered with or altered throughout this investigation. To prove this, I will provide a screenshot proving that the information will stay the same after my Autopsy analysation. You can see this in Figure 0.

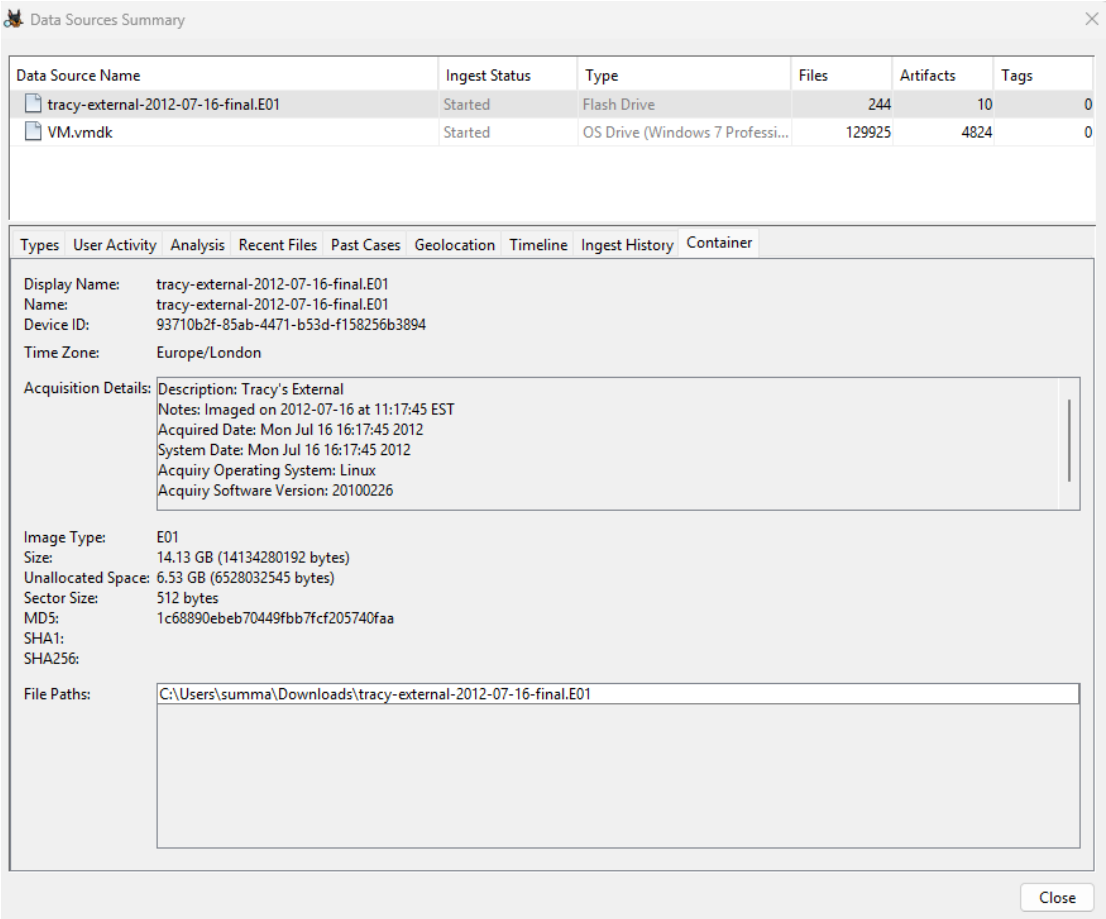

Figure 0: Evidence_1

This evidence has been preserved as it is under a folder on my personal desktop that includes information of this investigation. It has been saved under the name 'Evidence_1' as JPG file in the 'Autopsy Report' file.

I have made multiple folders to preserve the evidence. This can be shown below:

Figure 0.9

Evidence Examination Process

Throughout my investigation, I will be answering the following questions:

1. Are there files that prove that Tracy planned on stealing from the National Art Gallery?
2. Who are the users 'Perry' and 'Coral' mentioned in the email conversations?
3. Did Carry and Tracy talk about the plan?

Software Used

Operating System: Windows 11

Forensics Analysis: Autopsy 4.22.0

Email Findings

I have made multiple findings whilst using Autopsy to investigate the device. I have decided to start with the email conversations shared between Tracy and unknown receivers, also known as Perry, and another as Coral.

The first evidence includes an email that has been sent to Coral by Perry. This was the first email sent on the 19th of June at around 10PM. Below, you can refer to Figure 1 that shows the conversation. I found this under the E-Mail Messages tab under the 'Data Artifacts' section.

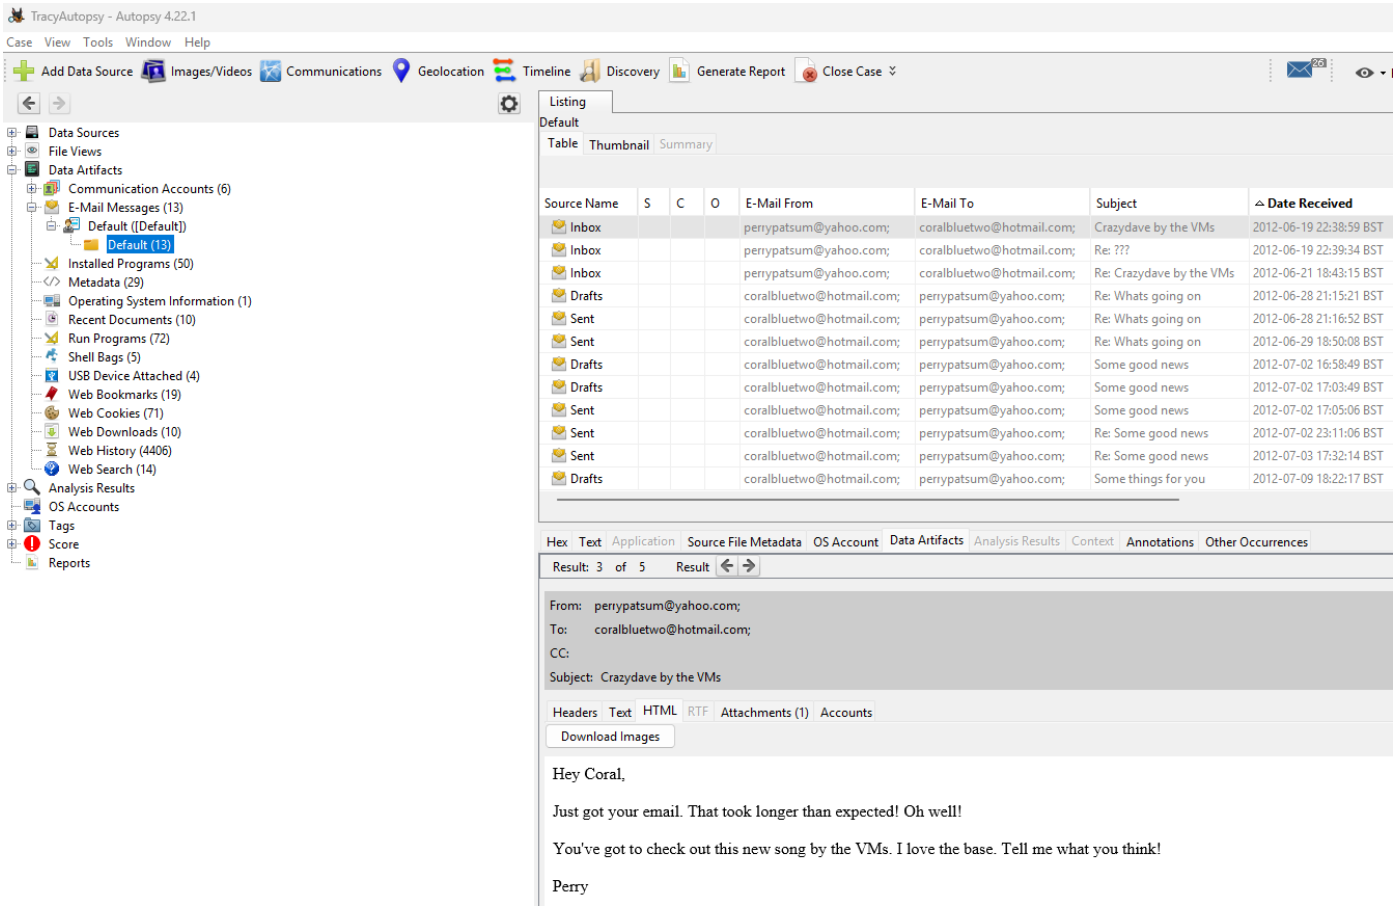

Figure 1: Email_1

Perry is referring to the songs that has been sent to them by Coral, as you can see in Figure 2. None of these look suspicious at first glance; however, there is a voice message called ‘CrazyDave.1mp3’ and in the hex it tells you to give it a minute to get interesting. There is a robot voice telling you to install ‘VirtualBox’, refer to Figure 3. The other VMs have been thoroughly checked by me, and I can approve that there is nothing suspicious in them, however ‘CrazyDave’ seemed like a disguise for the other ones.

Figure 3: VMs_Evidence_2

This was sent after Perry had listened to the voice message. Refer to Figure 4. Coral says ‘set me up’ as a code phrase, to indicate that he has set up the VirtualBox to communicate on.

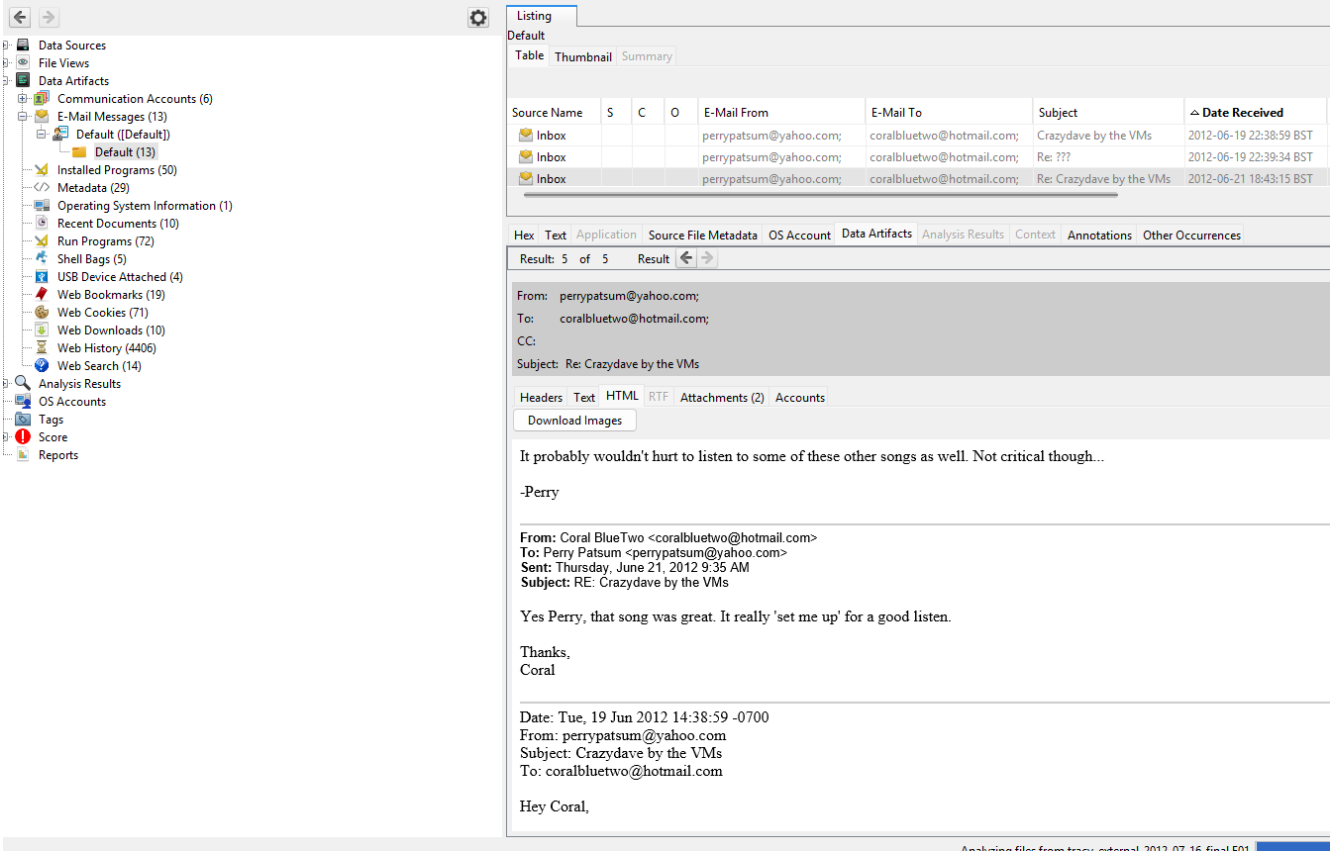

Figure 4: Email_2

In Figure 5, you can see another conversation between Perry and Coral. 'Coral' is now officially identified as Tracy, as they talk about having a child and issues with changing school, and that money is rough. This evidence also proves that they would like to use the application that was just installed to communicate as it is safer than emails.

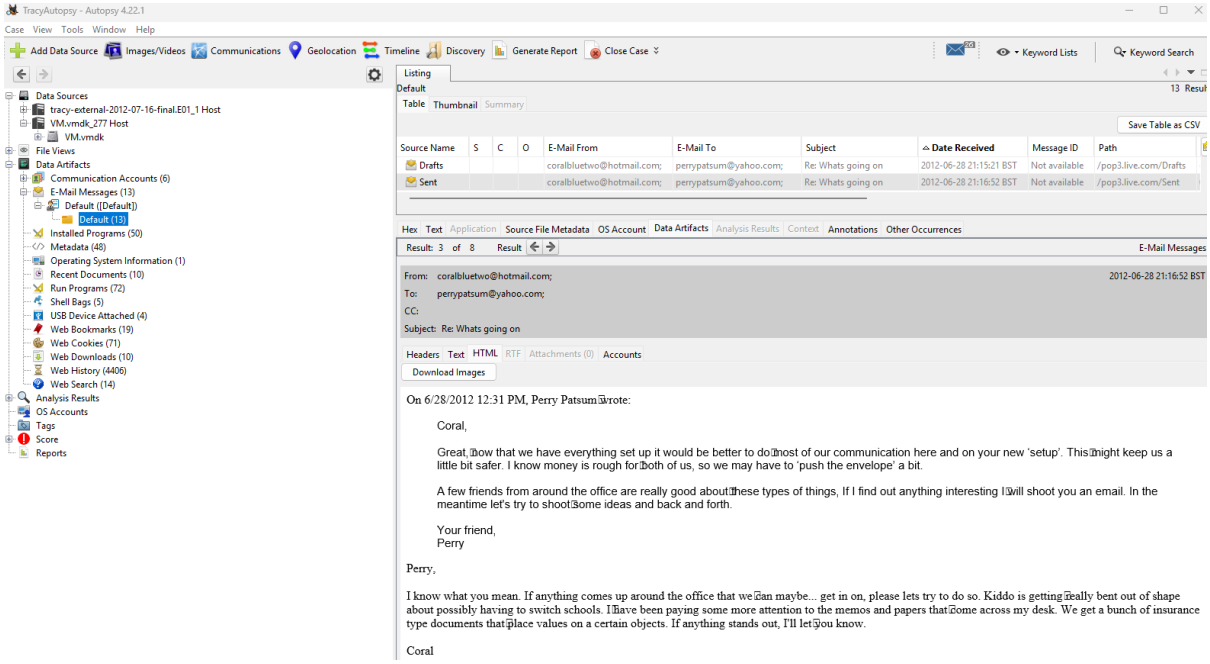

Figure 5: Email_3

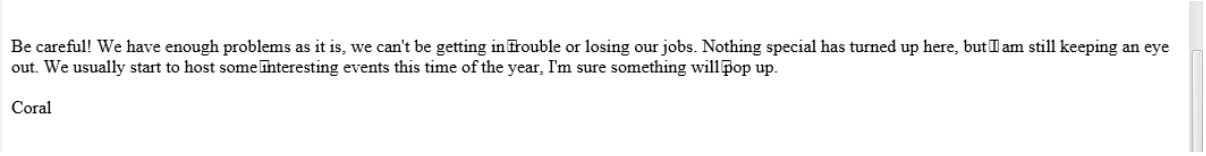
In Figure 6, Tracy replies to the previous email by letting ‘Perry’ know that she does not want to get into trouble if something goes wrong/information gets leaked.



Be careful! We have enough problems as it is, we can't be getting in trouble or losing our jobs. Nothing special has turned up here, but I am still keeping an eye out. We usually start to host some interesting events this time of the year, I'm sure something will pop up.

Coral

Figure 6: Email_4

In Figure 7, you can see that Tracy seems very happy that there is a foreign exhibit happening in the gallery, as does everyone in the workplace. Perry informs Tracy of this.

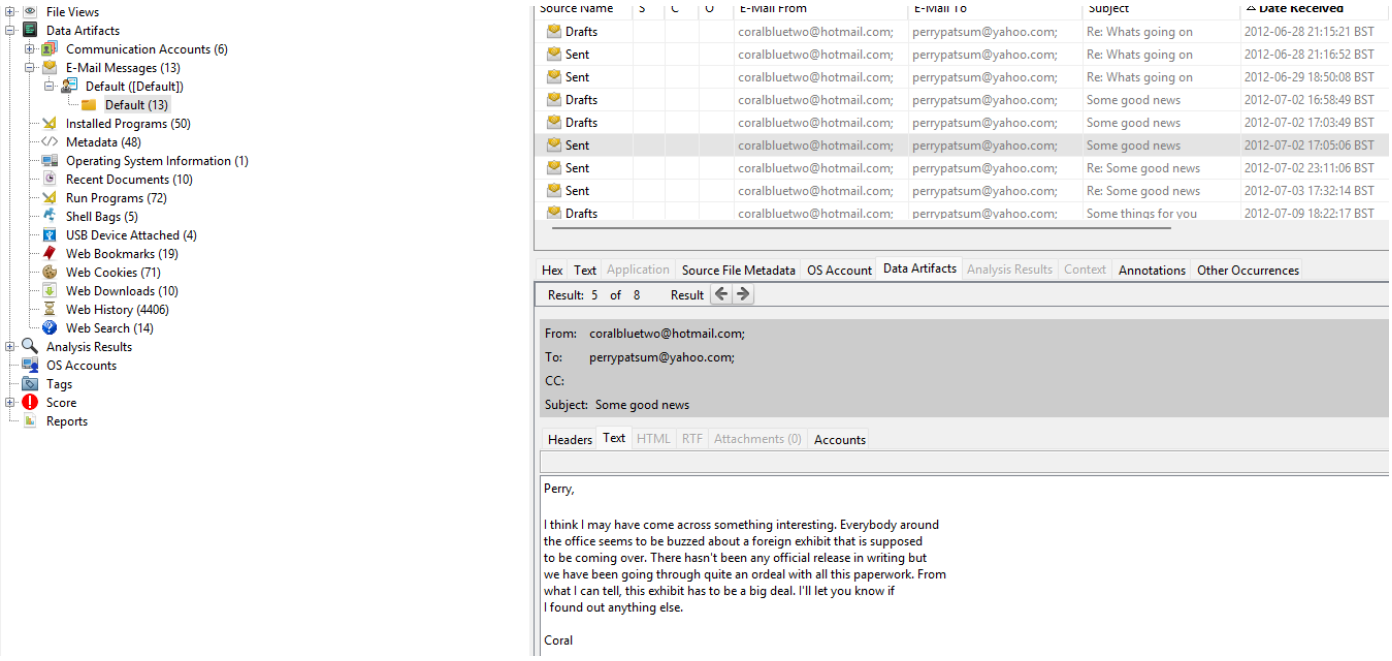


Figure 7: Email_5

There are updates included about the pricing of the exhibition. This can be seen in Figure 8.

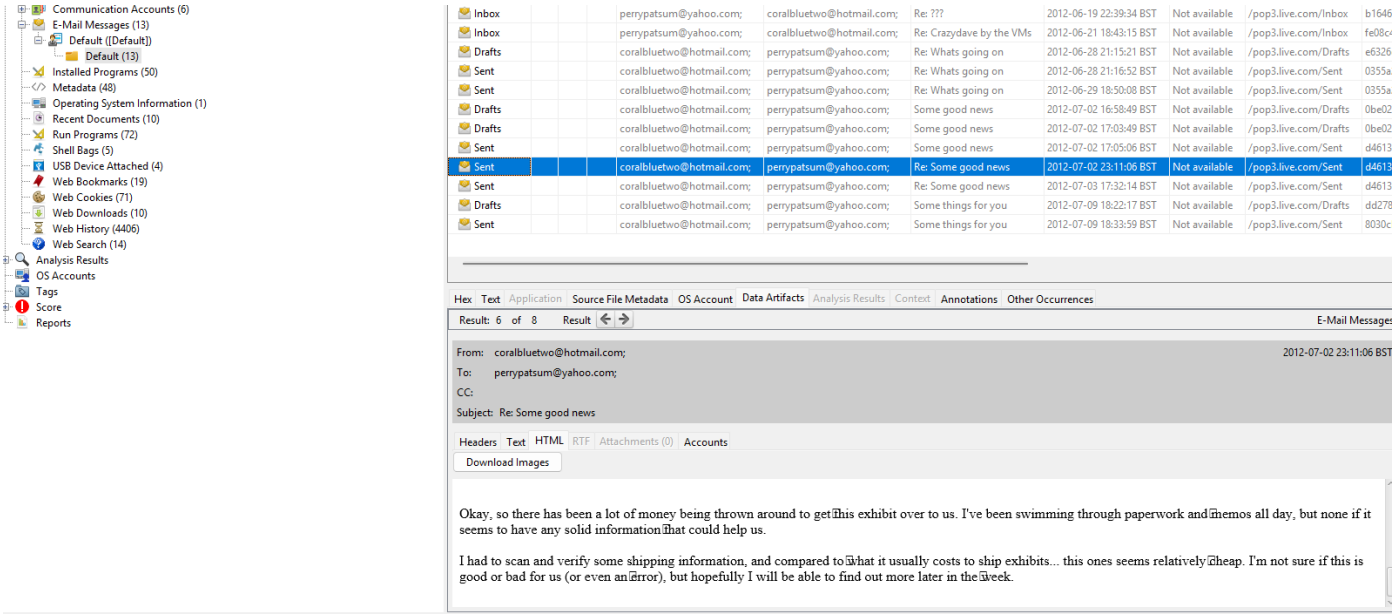

Figure 8: Email_6

The next figure shares information about the rare collection of stamps. See Figure 9 below for reference. Perry states 'Maybe this is our ticket', meaning this is the theft hat they could commit, as they are highly valuable.

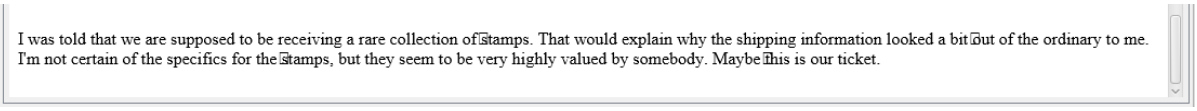

Figure 9: Email_7

Figure 10 is the final email sent between the users. Tracy attaches documents to the email and the password is Perry's old dog's name, which is a personal detail and something that is not shown in the Autopsy.

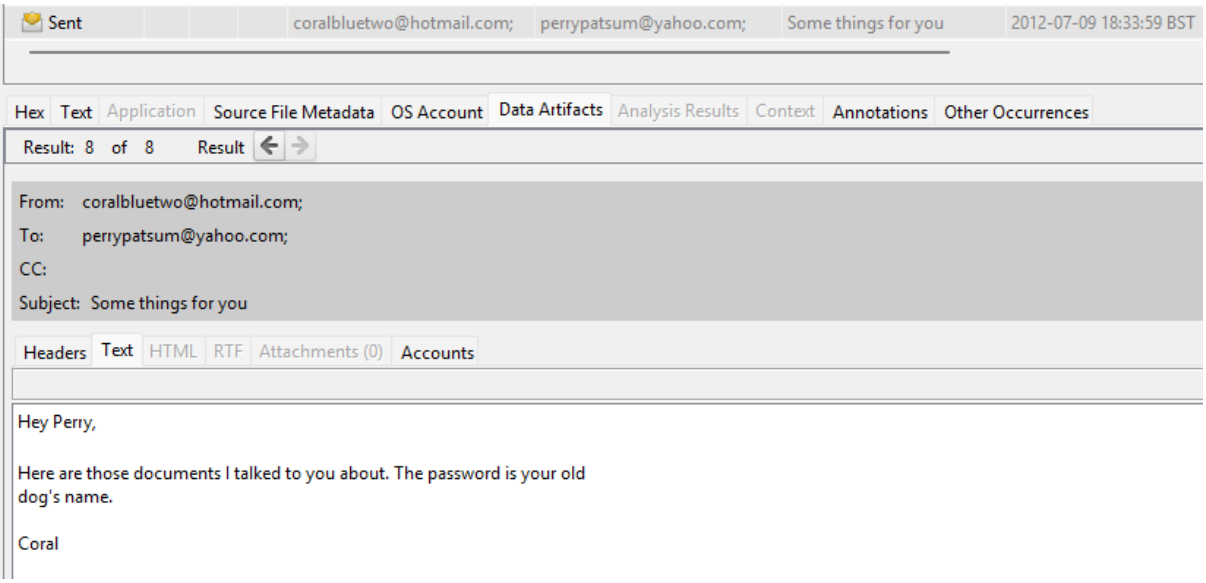

Figure 10: Email_8

PDF Findings

I have located several PDFs on this device. This can be found by going into File Views > File Types > By Extension > Documents > PDF (12). There are 12 pdfs included, most are copies of the other. You can see this in Figure 11.

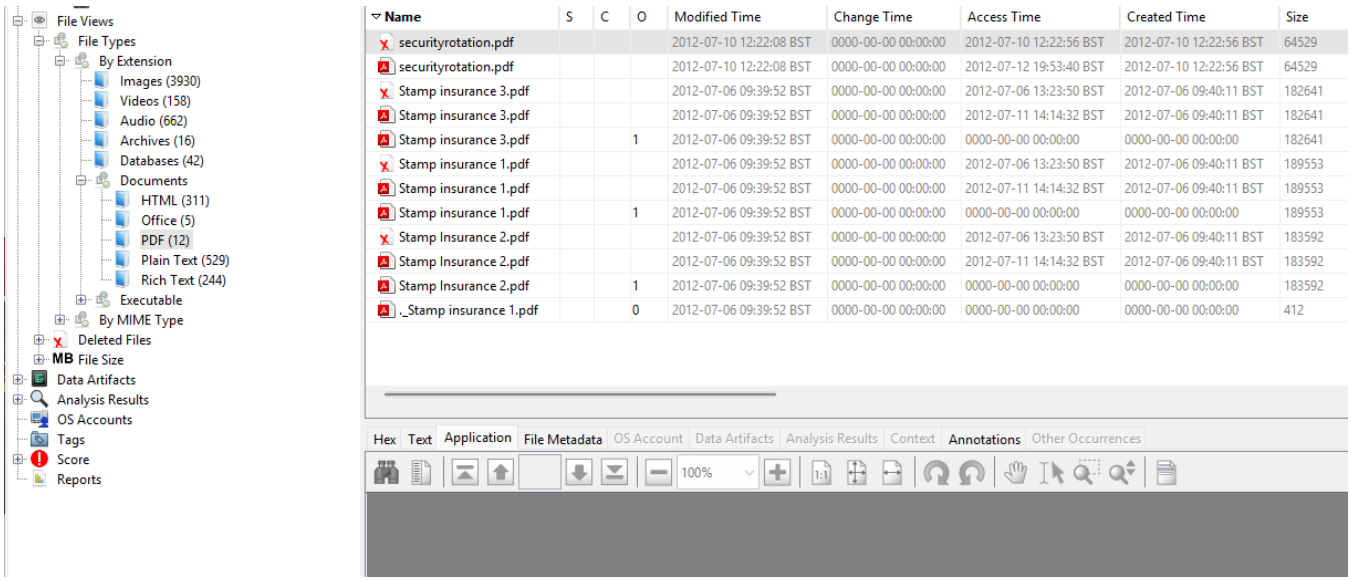

Figure 11: PDFs_Evidence

You can also find any suspicious images in Tracy's files. It was flagged in the Autopsy under user content suspicion. Carry knows how to work with steg files and encrypt any information sent between each other. AI had been used to decrypt the information, as I could not do it myself. It was encrypted as: "Carry - operation confirmed. Execute during Friday event. Secure files under codename: catsumtwelve", however I am not sure if the decryption is accurate, it is suspicious, however.

Figure 12: Suspicious_Images

The 'securityrotation.pdf' can be found in Figure 13. It is not too suspicious that Tracy has the security rotation on her device, as she is the supervisor of the store, however it is something to take note of.

Other Findings

There are other findings that I have discovered. One is a suspicious search that Tracy had made on July 5th at around 10 PM. Refer to Figure 17. This shows that she did research on how to find out the price of the stamps, as shown in the PDFs above.

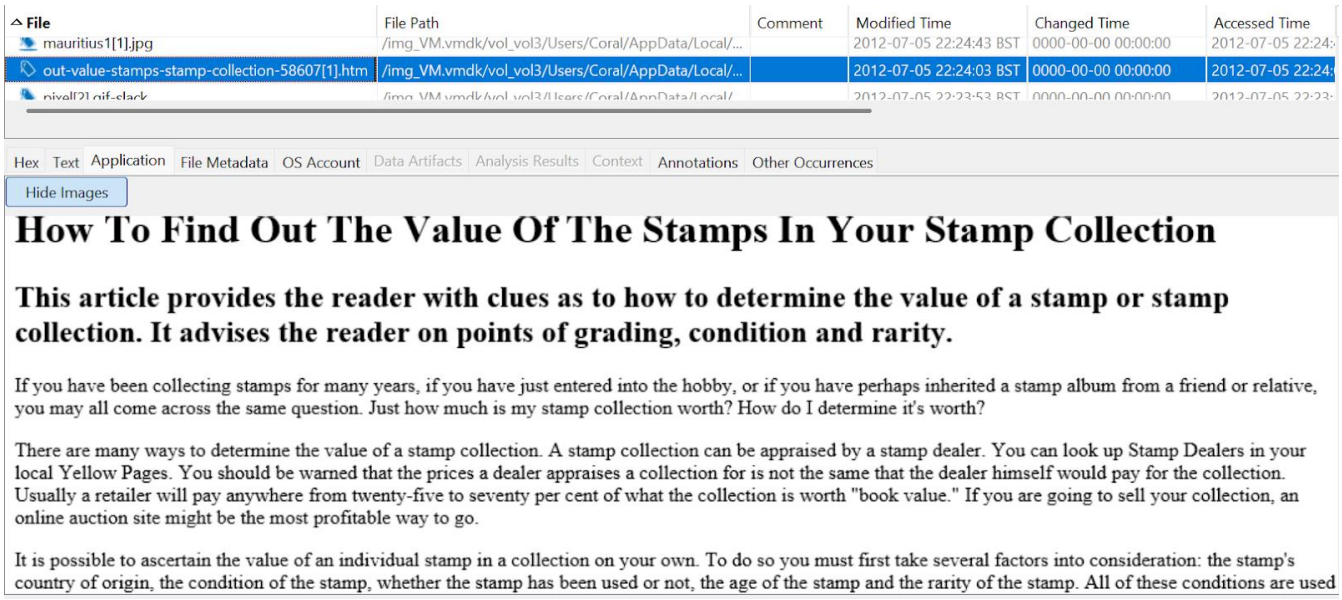

Figure 17: Web_Activity

Below, I will provide proof of the stamps that Tracy had saved to her device. These are clearly the stamps that Tracy wanted to steal.

Figure 18: Stamp_1

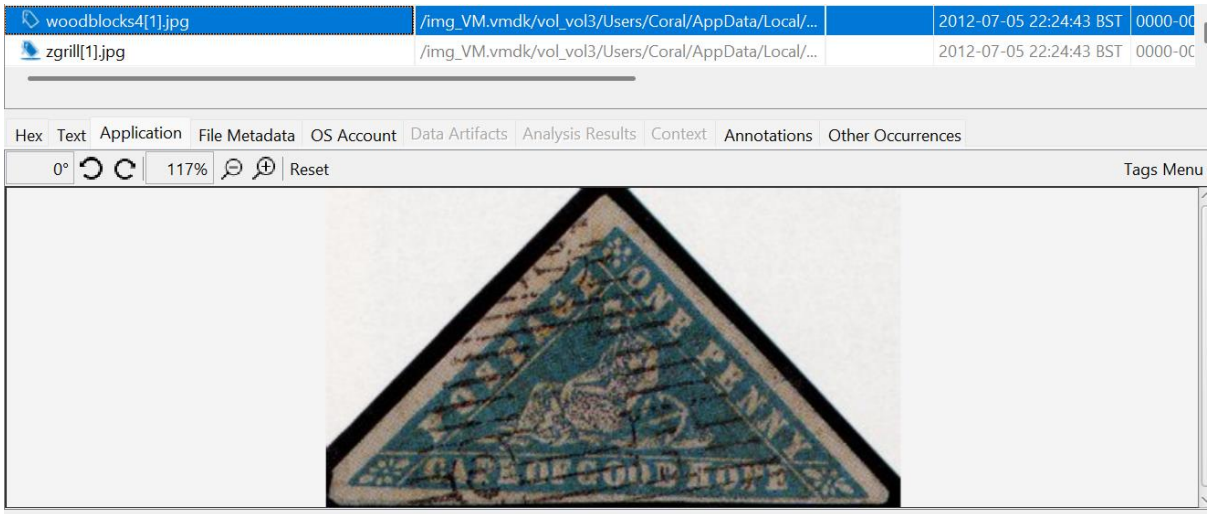

Figure 19: Stamp_2

Figure 20: Stamp_3

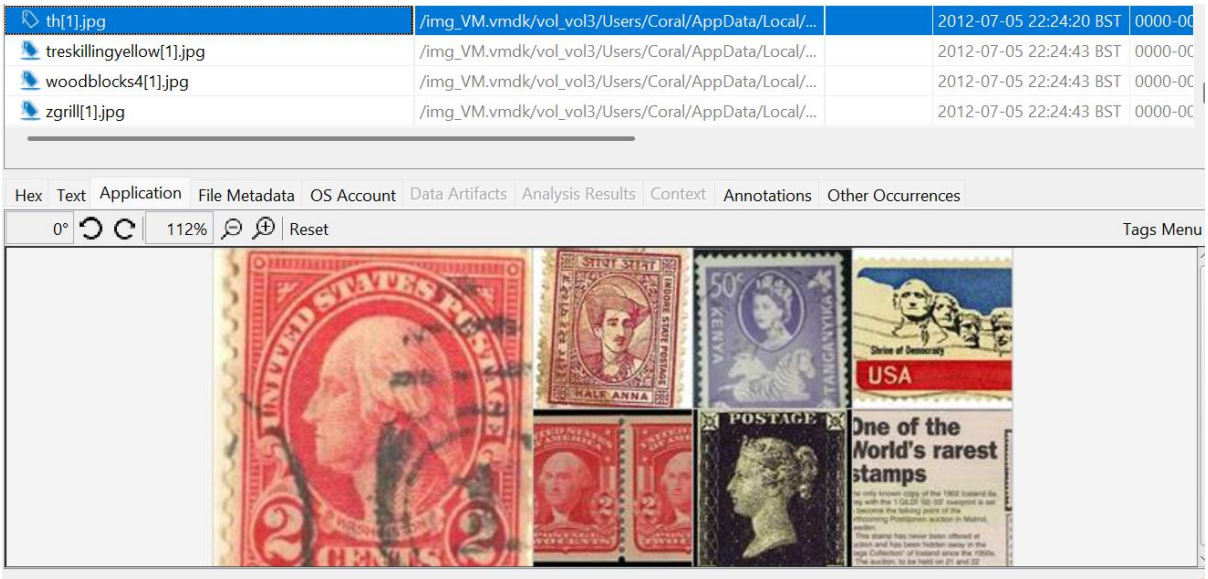

Figure 21: Stamp_4

In Figure 22, you can see that Tracy and Carry had communicated, and Tracy had sent the security rota to Carry, which was used to commit the crime.

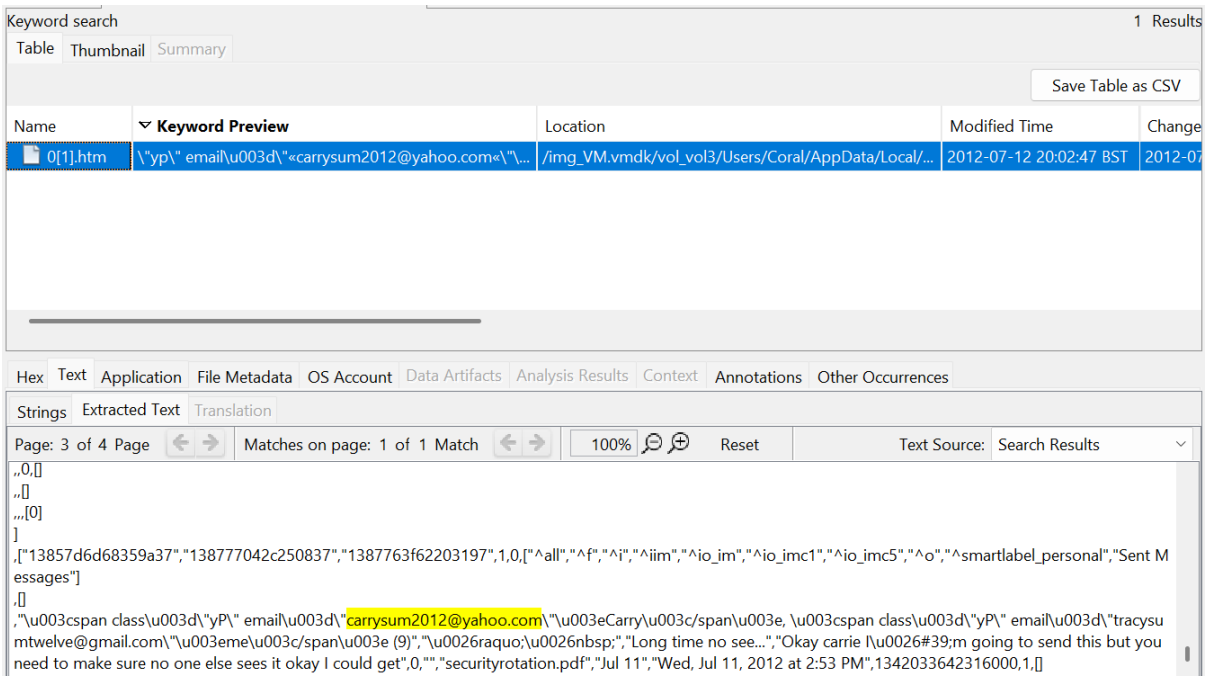

Figure 22: Email_Evidence

Timeline of Events

The timeline below is taken directly from Autopsy with the GMT time zone. You can see the timeline in Figure 23.

Date	Time	Event

19/06/2012	22:39	Tracy follows the instructions, sets up the VM, and replies
21/06/2012	18:43	Pat then sends over more MP3 files
28/06/2012	21:16	Tracy starts to worry about money and mentions that the insurance documents are in her office
02/07/2012	17:05	She later tells Pat about the upcoming foreign exhibit, which could be a chance to steal the valuable stamps
03/07/2012	17:32	Tracy discovers that the exhibit includes rare, high-value stamps
09/07/2012	18:33	She sends Pat a document containing the stamp insurance details. It uses a password, using the name of Pat's old dog
11/07/2012	14:53	Tracy also sends Carry the security rota, allowing Carry to help smuggle in the Krasonovian militants

Figure 23

Evidence Examination Answers

1. **Are there files that prove that Tracy planned on stealing from the National Art Gallery?**
   Yes, there is multiple evidence that proves Tracy planned on stealing from the National Art Gallery. She has also communicated with Carry and Pat in a lot of the evidence to further suggest that she committed this crime as she was low on money, talked about her children, had PDFs of confidential information, and had encrypted messages between her and Carry.

2. **Who are the users 'Perry' and 'Coral' mentioned in the email conversations?**
   The user 'Perry' is Pat, and 'Coral' is Tracy, as proven in the evidence above. Pat's email is 'perrypatsum', which is obviously a nickname for Pat.

3. **Did Carry and Tracy talk about the plan?**
   Carry and Tracy both talked about the plan, some of it was not clear due to encryption since she knows steganography, however they indicated a lot of the plan in the evidence above. It is very clear that Tracy and Pat were planning to do this.

Forensics Report – Summar Arshad - 24820372

Conclusion

In conclusion, it seems to be that Tracy and Pat had been planning to commit theft in the National Art Gallery. I have thoroughly studied the evidence on Autopsy and have provided evidence above of this. Due to finding out this information as soon as possible thanks to Joe, no crime was committed at the gallery, and the operation had stopped immediately. Tracy had a motive to do it, which was because she was low on money and wanted to keep custody of her child. However, this is not a reason to commit a crime at her workplace.

Figure 24 is to prove that I did not tamper with any evidence after finishing the autopsy report.
